### Bristle

Bristle Cup

Radial Bristle

Bristle is a unique material that uses flexible abrasive *fingers* embedded with abrasive grit. As a result, bristle performs like a wire brush but without the negative side effects. Benefits include:

- **Form** – Desco bristle is available in two formats: cup wheel and radial wheel.
- **Irregular surfaces** – Bristle excels at irregular surfaces and getting into voids.
- **Grit** – Like sanding discs, Desco bristle is available in various grits giving you the choice of cutting speed.
- **Preserves base metal** – Efficient cleaning with negligible base metal removal. An important characteristic where pipe or plate wall thickness is important to structural integrity.
- **FME friendly** – Unlike wire brush, there are no metal wires to break off and land in sensitive areas.

### BPH

BPH Disc

BPH Wheel

Black Poly-fiber Hybrid (BPH) is a non-woven abrasive material impregnated with abrasive grit and designed to quickly remove coatings, rust or other substances from steel or other base material. Benefits include:

- **Long life & self regenerating** – Material is thick and long wearing. As abrasive wears away during use, a sharp new cutting surface is exposed in a constant regeneration process.
- **Preserves base metal** – Efficient cleaning with negligible base metal removal. Important where wall thickness is vital to structural integrity.
- **Heat and load-up resistant** – Large pore/open grain provides 1) ventilation to dissipate heat and, 2) reduces abrasive pore clogging or "load-up".
- **FME friendly** – Unlike wire brush, there are no metal wires to break off and land in sensitive areas.
